

Insurance Restoration Checklist

Safety first: do not enter unsafe structures. Coordinate with emergency services and your carrier as applicable.

Document conditions with dated photos and notes before substantial demolition when safe to do so.

Separate emergency mitigation from rebuild scope so decisions remain clear.

Confirm coverage questions with your insurer or public adjuster; contractors should not invent policy interpretations.

Track temporary protections, drying, abatement needs, and life-safety constraints for occupied or adjacent spaces.

Align rebuild drawings, permits, and finish standards before authorizing full reconstruction.

Use this checklist for fire, water, and storm restoration planning with your project team.
